

# SAFETY BENEFIT

THE LED SOLUTION THAT STANDS ABOVE THE REST

## IMPROVE VISIBILITY BY CONVERTING TO LED

Airfield safety is one of the aviation industry's highest priorities. The key to avoiding unnecessary runway incursions is for aircraft and ground vehicles to maintain keen "situational awareness" – that is, a strong understanding of your location on the airfield and how it relates to taxi routes.

## REDUCE SIGN OUTAGES

Airfield signs are designed to assist in providing situational awareness for pilots and maintenance personnel as they navigate the airfield. An airfield sign that is not lighted as a result of a burnt out lamp can create confusion. LED signs are 25 times less likely than an incandescent sign to have a lamp go out and the sign go completely dark—a feature required per the latest FAA specs.

At the same time, fewer lamp changes means fewer maintenance vehicles on the field, reducing the amount of airfield congestion and the potential for incursions. With reliable, long lamp lives, Lumacurve airfield signs' LED lighting system makes your airfield safer.
